

How to Deliver an Effective Presentation

Teach the new knowledge or skills at a fast pace to maintain student attention and in small increments to ensure student understanding.

1. Identify the major steps you will use for the explanation:
2. Identify the key points you will use in your explanations of the new learning:
3. Good exemplars and non-exemplars play an important role in explanations. Identify the exemplars and non-exemplars you will use:
4. Model the procedures, such as thinking aloud, and use clear and consistent language.

Describe how you will model the new learning:

5. Monitor student understanding by asking questions and providing modified explanations or demonstrations as needed.

Identify the major questions you will use to gauge student understanding:

Identify the alternative explanations or demonstrations you can use if the initial ones are insufficient:

6. Record any reflections:
