

## Figure 1.5: Team Discussion Tool— Student Independent Practice Effectiveness Survey

**Directions:** Think about your independent practice assignments. The purpose of this survey is to help our teacher team design mathematics assignments that help improve your learning.

1. What type of mathematics independent practice helps you understand the unit lessons?

2. Do you like to receive the answers to the assigned problems? Why or why not?

3. Do you retry a problem right away if you make an error or mistake? Why or why not?

4. Who do you talk to if you need help with your mathematics independent practice?

5. What type of mathematics independent practice assignments do you not like? Which do not seem to help you improve your learning?

6. If you could provide one recommendation to your mathematics teacher to design better independent practice, what would that be?
